

EOL-Matrix: parameters that lead to learning environments where modern languages flourish

The matrix gives an overview over different fields and areas that might support schools developing learning environments where modern languages flourish. By matching four “environmental levels” with five dimensions of language learning, the matrix should help schools identifying new opportunities for and through languages. The goal is modelling your school towards a language friendly learning environment. The matrix is a dynamic tool. The matrix will be connected to a glossary and different tools and resources.

	NANO: learner	MICRO: class	MESO: schools	MACRO: system
1. Language and languages <i>operational dimension</i>				
2. Valuing languages <i>ethical dimension</i>				
3. Interculturality <i>experience dimension</i>				
4. Enriching curricula <i>curricula based dimension</i>				
5. Everyday languages <i>existential dimension</i>				

This is an output of the project “Learning environments where modern languages flourish” (2016-2019) of the European Centre for Modern Languages (ECML). The ECML is a Council of Europe institution promoting excellence in language education in its member states.
