

Age 3–6

Paxi explores Exoplanets

Source: ESA Website

“Hi! My name is Paxi. I'm an explorer from another planet. I've parked my spaceship in orbit and parachuted down to Earth to meet you. I get so excited when I look at the stars! I used to look at them in the night sky and wonder what they were. I couldn't wait to get a bit older so I could go and visit them myself.”

What you need:

- Computer with Internet connection in order to access the [ESA Kids website](#)

What to do:

- Motivate your child to have fun with Paxi, a little alien mascot, through interactive media and mini lessons for the younger explorers.
- Travel with your child and Paxi around all sorts of worlds in the spaceship and talk about the amazing things you can see! Help your child to understand more about space and your own planet.

Some more ideas:

- Monitor our planet from home and investigate the climate.
- Have fun helping your child to create a 3D model of a lunar base where astronauts can live and explore.
- It's time to get up, move our bodies, and train like an astronaut! Complete physical activities to practice agility, endurance, coordination, and strength.
